

Bird Netting

Polyfab's high quality bird netting is knitted with UVR stabilised, monofilament HDPE yarns, and has a reinforced selvedge. The 12mm x 12 mm x 35 gsm hexagonal construction is sized to deny access to the smallest bird species, including Silvereye and starlings, and has sufficient strength to resist the predations of larger birds, including parrots and crows. The black coloured centre line assists growers to align the product during installation; and the lock-stitch construction ensures the netting does not fray when cut. The reinforced selvedge provides added resistance to the inevitable concentrated loading at connection points.

ROLL SIZES (available in white only)

Width	Roll Length (m) x Weight (kg)
5m	50 x 8.75, 100 x 17.5
10m	10 x 3.5, 50 x 17.5, 100 x 35
15m	50 x 26.25
20m	50 x 35

Horticover

Horticover is a knitted form UVR stabilised, HDPE tape, and is designed as an ultra light external cover for hothouse igloos. When fabricated correctly, the cover can be readily installed and removed, to allow for the optimum control of sun protection, light transmission and insulation at different times of the year. It is an alternative option to whitewashing the structure itself, with the added benefit of increased solar control in summer months. Because the polyethylene tape does not absorb water, the fabric will not rot; and the UVR stabilisers in it give added protection to the polyethylene skins over which it is laid. The lock stitch construction means it will not fray when cut or punctured.

PRODUCT SPECIFICATION (available in white only)

Product Name	Weight (gsm)	Roll Width (m) x Length (m) x Weight (kg)
Horticover Light	90 ± 10%	3.66 x 300 x 100
Horticover Medium	110 ± 10%	3.66 x 300 x 120
